

Submission

NSW Office of Water & Natural Resource Commission

Review of 2004 Water Sharing Plans

130131

Introduction

NSW Irrigators' Council (NSWIC) represents more than 12,000 irrigation farmers across NSW. These irrigators access regulated, unregulated and groundwater systems. Our Members include valley water user association, food and fibre groups, irrigation corporations and community groups from the rice, cotton, dairy and horticulture industries.

NSWIC engages in advocacy, policy development and media relations. As an apolitical entity, we are available for the provision of advise to all stakeholders and decision makers.

This submission represents the view of the Members of NSWIC with respect to the NSW Government's *Review of 2004 Water Sharing Plans*.

General Comments

NSWIC welcomes the opportunity to make a submission to the NSW Government on review of the 31 Water Sharing Plans (WSP) which are due to expire in 2014. As these WSPs establish the rules for sharing water resources between water users and the environment in NSW, they are of great importance to our Members.

NSWIC supports the development and growth of sustainable irrigated agriculture through the ongoing management of NSW's water resources to ensure the indefinite provision of water for human, environmental and productive use. The introduction of the 31 WSP in 2004 has not only allowed for the sustainable management of NSW surface and groundwater sources, but also provided water users with perpetual access licenses, equitable conditions and increased opportunities to trade water through separation of land and water.

Given the importance of these WSPs, NSWIC strongly recommends that any proposed changes are evaluated with care and with full consideration of the impacts these will have on all water users. Additionally, any proposed amendments to the current WSPs have to be subject to a comprehensive consultation process that ensures that local knowledge can be effectively utilized and stakeholders are given an opportunity to evaluate and comment on any proposed changes.

NSWIC is extremely disappointed with the timing of this consultation period. We have attached a copy of our Consultation Expectation Policy. It is our view that the two week period encompassing Christmas and New Year cannot be considered in addressing the time made available to stakeholders. As such, this process does not comply with our expectations should be reviewed forthwith.

Specific Comments

Murray Darling Basin Plan

In the absence of sufficient detail on all aspects of the Murray Darling Basin Plan, NSWIC is extremely concerned that the possible transition to Basin Plan requirements by 2019 might trigger a remake of the 14 water sharing plans that are located in the Murray Darling Basin should these WSP be amended as a result of this review.

For ease of administration and for cost effective purposes, NSWIC recommends to extend the current WSP until such time as all Basin Plan details are finalised. Any amendments to the current WSP would have to be made in the knowledge that further changes might be necessary after only a five year time period. Such a short implementation period is not effective or efficient from NSWIC's point of view.

Localism

While NSWIC considers it advisable to make minimal or no changes to the current WSP, we acknowledge that Members of NSWIC may make recommendations to individual WSP if current requirements are considered inadequate from their point of view.

NSWIC would like to highlight that since our Members currently operate in areas that are governed by these WSP, they have the in-depth knowledge and expertise to inform this review on a detailed level. We have continuously outlined the need for localism and consider this review to be an ideal opportunity to draw on the extensive knowledge and understanding of those individuals who currently live and work in the relevant areas.

Public Consultation

NSWIC is aware that any amendments to the current WSP will trigger a replacement process including a public exhibition process. In order to allow stakeholders sufficient time to evaluate and comment on any proposed amendments to the current WSPs, NSWIC strongly urges the NSW Government to conduct an extensive consultation process that will allow for a full analysis of the impacts those changes will have on all water users.

Furthermore, NSWIC strongly recommends to include industry representatives on the panel that will consider the outcomes of the plan review and provide recommendations to the Minister.

ENDS.

Consultation

The Expectations of Industry

090303

Andrew Gregson
Chief Executive Officer

Introduction

NSW Irrigators' Council (NSWIC) represents more than 12,000 irrigation farmers across NSW. These irrigators are on regulated, unregulated and groundwater systems. Our members include valley water user associations, food and fibre groups, irrigation corporations and commodity groups from the rice, cotton, dairy and horticultural industries.

This document represents the views of the members of NSWIC. However each member reserves the right to an independent view on issues that directly relate to their areas of operation, or expertise, or any other issues that they may deem relevant.

Executive Summary

This document sets out the consultation process that the irrigation industry expects from Government on policy matters affecting the industry.

Specifically, the industry expects that the contents of this document inform the consultation process with respect to preparation of the Basin Plan by the Murray Darling Basin Authority.

Background

Industry has been critical of consultation processes entered into by both State and Commonwealth Government entities in the change process with respect to water policy. Irrigators have significant sums invested in their businesses, all of which are underpinned by the value, security and reliability of their primary asset – water.

Irrigators recognise the imperatives for change and are content to provide advice on policy measures to ensure effective outcomes for all involved.

In light of these two factors, it is not unreasonable that irrigators request adequate consultation.

Recent consultation efforts have ranged from excellent to woeful¹. Irrigators believe that a method of consultation should be determined prior to the commencement of a policy change process. To that end, this document sets out the methods which we believe are acceptable and ought be adopted by Government both State and Commonwealth.

In particular, this document aims to inform the Murray Darling Basin Authority in its work developing the Basin Plan.

¹ See case studies later in this document.

Forms of Consultation

We consider two forms of consultation to be acceptable – Direct and Indirect. The preferred option will be dictated by circumstances.

Direct Consultation

This method involves engaging directly with affected parties, together with their representative organisations. As a default, it ought always be considered the preferred method of consultation.

Irrigators acknowledge that practical exigencies must be considered to determine if Direct Consultation is possible. Such considerations will include:

- The number of affected stakeholders (the smaller the number, the more ideal this method);
- The timeframe available for implementation (the longer the timeframe, the more ideal this method)²; and
- The geographical distribution of stakeholders (the closer the proximity, the more ideal this method).

Indirect (Peak Body) Consultation

This method involves engaging with bodies that represent affected parties. NSW Irrigators Council is the peak body representing irrigators in this state. The National Irrigators Council is the peak body in respect of Commonwealth issues.

Irrigators acknowledge that there will be occasions on which consultation with peak bodies is necessary for practical reasons. Such reasons may include:

- An overly large number of affected stakeholders;
- A short timeframe (not artificial) for implementation;
- A large geographic spread of stakeholders; and
- An issue technical in nature requiring specific policy expertise.

This form of consultation requires some specific considerations that must be addressed in order for it to be considered acceptable;

- Timeframes

² Although note specifically that artificial timeframes, such as political necessity, will not be well received by irrigators.

Indirect Consultation is, in essence, the devolution of activity to external bodies. That is, the task of engaging with affected stakeholders to assess their views and to gather their input is “outsourced” to a peak body. That peak body cannot operate in a vacuum and, as such, must seek the views of its members lest it become unrepresentative. Dependent on the nature of the issues and the stakeholders, this may take some time. It is vital that peak bodies be requested to provide advice on necessary timeframes prior to seeking to engage them in an Indirect Consultation model.

- **Resource Constraints**

Peak bodies do not possess the resources of government. In most instances – and certainly in the case of irrigation industry peak bodies – their resources are gathered directly from members and hence must be well accounted for.

Peak bodies engage in a significant range of issues and activities, many of which feature their own time constraints.

Prior to commencing the consultation process, discussions with peak bodies must be held to ensure that the needs of stakeholders with respect to resourcing and timeframes are respected. This may include ensuring that consultation does not occur during times of known peak demand; coordination with other government agencies to avoid multiple overlapping consultation processes; and coordination with peak bodies existing consultation mechanisms (for example, NSWIC meeting dates are set annually and publicly available. These are an ideal forum for discussion as they provides access to key stakeholders with no additional cost to stakeholders).

Stages of Consultation

Irrigators believe that a multi-stage consultative model, in either the Direct or Indirect applications, is necessary.

(i) *Identification of problem and necessity for change*

Irrigators are wary of change for the sake of change. In order to engage industry in the process of change, an identification of its necessity is required. This should take the form of a published³ discussion paper as a minimum requirement.

(ii) *Identification of solutions and method for implementation*

With a problem identified and described, a description of possible solutions together with a proposed method of implementation should be published.

³ We accept that “published” may mean via internet download, but require that hard copies be made available free of charge on request.

It is imperative that the document clearly note that the proposed solutions are not exhaustive. The input of stakeholders in seeking solutions to an identified problem is a clear indicator of meaningful consultation.

It is likely, in practice, that steps (i) and (ii) will be carried out concurrently. This should take the form of a document seeking written submissions in response. The availability of the document must be widely publicised⁴. The method for doing so will vary depending on the method of consultation. As a threshold, at least 90% of affected stakeholders ought to be targeted to be reached by publicity.

(iii) *Summary of submissions, identification of preferred approach*

Subsequent to the closing date, a document ought to be published that summarises the submissions received in the various points covered. It must also append the full submissions.

Acknowledgement of a consideration of the weighting of submissions must be given. As an example, a submission from a recognised and well supported peak body (such as NSWIC) must be provided greater weight than a submission from a small body, an individual or a commercial body with potential commercial interests.

There are no circumstances in which submissions ought to be kept confidential. Whilst we recognise that identification of individuals might be restricted, any material on which a decision might be based must be available to all stakeholders.

The document must then identify a preferred approach, clearly stating the reasons why that approach is preferred and why alternate approaches have been rejected.

Where the need for change has been questioned by submissions, indicating that a case has not been made in the opinions of stakeholders, further discussion and justification of the necessity must be made in this document.

(iv) *Explanation of interim determination and final feedback*

The document prepared in stage (iii) must now be taken directly to stakeholders via forums, hearings or public discussions. All stakeholders, whether a Direct or Indirect model is chosen, must have an opportunity to engage during this stage.

The aim of this direct stage is to explain the necessity for change, to explain the options, to identify the preferred option (together with an explanation as to why it is the preferred option) and to seek further input and feedback. Further change to a policy at this point should not, under any circumstances, be ruled out.

(v) *Publication of final determination*

⁴ Regional newspapers, radio stations and the websites of representative groups and infrastructure operators are useful options in this respect.

Subsequent to stage (iv), a document must be published summarising the feedback received from that stage, identifying any further changes, identifying why any particular issues raised across various hearings at stage (iv) were not taken into account and providing a final version of the preferred solution.

What Consultation Is Not

“Briefings” after the fact are not consultation (although they may form part of the process). Stakeholders will not be well disposed to engagement where prior decisions have been made by parties unwilling to change them. Briefings in the absence of consultation will serve to alienate stakeholders.

Invitations to attend sessions with minimal notice (less than 10 days) is not consultation. Consideration must be given to the regional location of parties involved, together with the expenses and logistical issues of travel from those regions.

Case Study One

Australian Productivity Commission (Review of Drought Support)

Getting it Right

During 2008, the Australian Productivity Commission commenced a review of Government Drought Support for agriculture. The review commenced with the publication of a document to which submissions were sought. A significant period of time was allowed for submissions.

Subsequent to the close of submissions, a draft position was published which took into account written submissions that were received, identified issues raised in submissions and identified a number of changes considered subsequent to submissions.

The Commission then engaged in a large series of public hearings in areas where affected stakeholders were located. Parties were invited to provide presentations in support of their submissions. Parties who had not lodged written submissions were also welcome to seek leave to appear. The meetings were open to the public, who were also given the opportunity to address the hearing.

A series of “round tables” in regional areas was conducted with identified and self-disclosed stakeholders. These meetings gave those who were unable or unwilling to provide presentations in public the opportunity to have input. At the same time, no submissions were kept confidential, the Commission recognising that the basis for its determinations must be available to all.

Importantly, present at the hearing were three Commissioners. It is vital that the decision makers themselves are available to stakeholders, rather than engaging staff to undertake this task.

We understand that a final publication will be made available in 2009.

Case Study Two

CSIRO (Sustainable Yields Audit)

Getting it Wrong

In early December, CSIRO (in conjunction with a number of other Government entities) conducted a regional “consultation” series with respect to the Sustainable Yields Audit. The series was, in our opinion, ill-informed, poorly organised, poorly executed and poorly received.

In late November, CSIRO sought advice from NSWIC over the format and timing of the series. We provided advice that:

- The series did not cover sufficient regional centres to engage all stakeholders. In particular, Northern NSW had not been included;
- The series should not be by invitation, but should be open to all comers given the implications not only for irrigators but for the communities that they support;
- Ninety minutes was vastly insufficient to cover the depth and breadth of interest that would be raised by attendees; and
- That the timeframe between invitation and the event was insufficient.

None of that advice was adopted.

Invitations were sent to an undisclosed number of stakeholders who had been identified by an undisclosed method. In the short space of time available to advise attendance, CSIRO threatened to cancel a number of sessions on the basis of low responses. Given the limited notice and invitation list, NSWIC became aware of a number of stakeholders who wanted to attend but were unable to.

During the sessions, information was presented as a “briefing” despite being described as consultation. As such, extremely limited time was available for questions to be addressed – a key feature of consultation. Moreover, where information that was presented was questioned, a defensive stance was taken – a key feature of lack of willingness to engage stakeholders in a consultative fashion.

In particular, NSWIC is particularly concerned at the lack of willingness to engage on factual matters contained within the report. Where glaring inaccuracies were pointed out, defensiveness was again encountered. In several instances, inaccuracies that had been advised by stakeholders were perpetuated in later documents.

Further, several presenters were clearly not aware of the full range of detail surrounding the matters that they discussed. It is imperative that those seeking feedback on a subject understand that subject in depth prior to commencing consultation.
